

Bash Shell Script CodeCount™

Counting Standard

University of Southern California

Center for Systems and Software Engineering

December , 2016

Revision Sheet

Date	Version	Revision Description	Author
6/16/2016	1.0	Original Release	Matthew Swartz
7/8/2016	1.1	Updated Complexity Table	Matthew Swartz

Table of Contents

No.	Contents	Page No.
1.0	Definitions	4
1.1	SLOC	4
1.2	Physical SLOC	4
1.3	Logical SLOC	4
1.4	Data declaration line	4
1.5	Compiler directive	4
1.6	Blank line	4
1.7	Comment line	4
1.8	Executable line of code	4
2.0	Checklist for source statement counts	6
3.0	Examples of logical SLOC counting	7
3.1	Executable Lines	7
3.1.1	Selection Statements	7
3.1.2	Iteration Statements	8
3.1.3	Jump Statements	9
3.1.4	Expression Statements	9
3.1.5	Block Statements	10
3.2	Declaration lines	10
4.0	Complexity	11
5.0	Notes on Special Character Processing	11

1. Definitions

- 1.1. **SLOC** – Source Lines of Code is a unit used to measure the size of software program. SLOC counts the program source code based on a certain set of rules. SLOC is a key input for estimating project effort and is also used to calculate productivity and other measurements.
- 1.2. **Physical SLOC** – One physical SLOC is corresponding to one line starting with the first character and ending by a carriage return or an end-of-file marker of the same line, and which excludes the blank and comment line.
- 1.3. **Logical SLOC** – Lines of code intended to measure “statements”, which normally terminate by a semicolon (C/C++, Java, C#) or a carriage return (VB, Assembly), etc. Logical SLOC are not sensitive to format and style conventions, but they are language-dependent.
- 1.4. **Data declaration line or data line** – A line that contains declaration of data and used by an assembler or compiler to interpret other elements of the program.

The following table lists the Bash Shell Script keywords that denote data declaration lines:

Data Declaration
<code>declare</code>
<code>local</code>
<code>type</code>
<code>typeset</code>

- 1.5. **Compiler Directives** – A statement that tells the compiler how to compile a program, but not what to compile. Bash Shell Script does not contain any compiler directives.
- 1.6. **Blank Line** – A physical line of code, which contains any number of white space characters (spaces, tabs, form feed, carriage return, line feed, or their derivatives).
- 1.7. **Comment Line** – A comment is defined as a string of zero or more characters that follow language-specific comment delimiter.
Bash Shell Script comment delimiters are “#”. A whole comment line may span one line and does not contain any compilable source code. An embedded comment can co-exist with compilable source code on the same physical line. Banners and empty comments are treated as types of comments.
- 1.8. **Executable Line of code** – A line that contains software instruction executed during runtime and on which a breakpoint can be set in a debugging tool. An instruction can be stated in a simple or compound form.
 - An executable line of code may contain the following program control statements:
 - Selection statements (if, select, case)
 - Iteration statements (for, while, until)
 - Empty statements (one or more “;”)
 - Jump statements (return, break, continue, exit)

- Expression statements (function calls, assignment statements, operations, etc.)
- Block statements
- An executable line of code may not contain the following statements:
 - Data declaration (data) lines
 - Whole line comments, including empty comments and banners
 - Blank lines

2. Checklist for source statement counts

<u>PHYSICAL SLOC COUNTING RULES</u>			
MEASUREMENT UNIT	ORDER OF PRECEDENCE	PHYSICAL SLOC	COMMENTS
Executable Lines	1	One per line	Defined in 1.8
Non-executable Lines			
Declaration (Data) Lines	2	One per line	Defined in 1.4
Compiler Directives	3	NA	Defined in 1.5
Comments			Defined in 1.7
On their own lines	4	Not Included	
Embedded	5	Not Included	
Banners	6	Not Included	
Empty Comments	7	Not Included	
Blank lines	8	Not Included	Defined in 1.6

<u>LOGICAL SLOC COUNTING RULES</u>				
NO.	STRUCTURE	ORDER OF PRECEDENCE	LOGICAL SLOC RULES	COMMENTS
R01	"for", "while" or "if" statement	1	Count once	"while" is an independent statement
R02	"do{} while()" statement	2	Count once	Braces {...} and semicolon ; used with statement are not counted
R03	Statements ending with a semicolon or new line	3	Count once per statement, including empty statement	Semicolons within "for" statements are not counted. Semicolons used with R01 and R02 are not counted.
R04	Block delimiters, braces {...}	4	Count once per pair of braces {...}, except where a closing brace is followed by a semicolon, i.e. }; or an opening brace comes after a keyword "else".	Braces used with R01 and R02 are not counted. Function definition is counted once since it is followed by {...}.
R05	Compiler directives	5	NA	No compiler directives for bash

3. Examples

EXECUTABLE LINES

SELECTION Statement

ESS1 – if, elif, else and nested if statements

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
<pre>if test-commands; then consequent-commands; [elif more-test-commands; then more-consequents;] [else alternate-consequents;] fi</pre>	<pre>if [\$A == foo]; then echo oof; elif [\$A == bar]; then echo rab; elif [\$A == baz]; then echo zab; else echo nile; fi</pre>	<pre>1 1 1 1 1 1 0 1 0</pre>

ESS2 – case and nested case statements

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
<pre>case word in [([pattern [pattern]...) command-list ;;]... esac</pre>	<pre>echo -n "Enter an animal name: " read ANIMAL echo -n "The \$ANIMAL has " case \$ANIMAL in horse dog cat) echo -n "four";; man kangaroo) echo -n "two";; *) echo -n "unknown";; esac echo " legs."</pre>	<pre>1 1 1 1 1 1 1 0 1</pre>

ESS3 – select and nested select statements

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
<pre>select name [in words ...]; do commands; done</pre>	<pre>select fname in *; do echo picked \$fname \(\$REPLY) break; done</pre>	<pre>1 0 1 1 0</pre>

ESS4 – trap

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
declare -t VARIABLE=value	trap "echo Booh!" SIGINT	1
	echo "pid is \$\$"	1
trap "echo VARIABLE is being used here." DEBUG	while :	1
	# This is the same as "while true".	0
	do	0
	sleep 60	1
# rest of the script	# This script is not doing anything.	0
	done	0

ITERATION Statements**EIS1 – for-do**

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
	# Loop through a set of strings:	0
	for m in Apple Sony Panasonic	1
	"Hewlett Packard" Nokiado; do	0
	echo "Manufacturer is:" \$m; done	1
for name [in words ...];		
do	# or as a single line...	0
<i>commands</i> ;	for m in Apple Sony Panasonic	1
done	"Hewlett Packard" Nokia;	0
	do	0
	echo "Manufacturer is:" \$m; done	1
	# Loop 100 times:	0
	for i in \$(seq 1 100);	1
	do	0
for ((<i>expr1</i> ; <i>expr2</i> ; <i>expr3</i>));	echo -n "Hello World\${i} "; done	1
do		
<i>commands</i> ;	# Loop through the arguments	0
done	passed to a function:	0
	foo (){	1
	for ARG in "\$@";	1
	do	0
	echo \$ARG; done}	1
	# try it	0

EIS2 – while-do

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
	i="0"	1
while <i>test-commands</i> ;	while [\$i -lt 4]	1
do <i>consequent-commands</i> ;	do	0
done	xterm &	1
	i=\$((i+1))	1
	done	0

EJS3 – until-do

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
until <i>test-commands</i> ; do <i>consequent-commands</i> ; done	myvar=0 until [\$myvar -eq 10] do echo \$myvar myvar=\$((\$myvar + 1)) done	1 1 0 1 1 0

JUMP Statement
(are counted as they invoke action – pass to the next statement)

EJS1 - return

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
return [<i>n</i>]	return \$abc	1

EJS2 - break

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
break	echo "OK, see you!" break	1 1

EJS3 – exit function

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
exit	if test "\$1" == "" ; then echo \$0 BAR exit fi	1 1 1 0

EJS4 - continue

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
continue	if [["\$name" != *[:upper:]*]]; then continue fi	1 0 1 0

EXPRESSION Statement**EES1 – function call**

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
<function_name>	read_file	1

EES2 – assignment statement

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
<name> = <value>;	"\$1" ="one"	1

Block Statement**EBS1 – block means related statements treated as a unit**

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
# start of block { <definitions> <statement> } # end of block	# start of block { \$i = 0; echo "hi" } # end of block	0 0 1 1 0 0

DECLARATION OR DATA LINES**DDL1 – variable declaration**

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
<keyword><option><variable>	declare -i number	1

4. Complexity

Complexity measures the occurrences of different keywords in code baseline. Below table identifies the categories and their respective keywords that are counted as part of the complexity metrics.

Math Functions	Trig	Log	Calculations	Conditionals	Logic	Assignment
			++	select	-lt	=
			--	while	-gt	
			+	until	-ge	
			-	elif	-le	
			/	case	-eq	
			*	for	-ne	
			%	if	&&	
			^			
					==	
					>=	
					<=	
					!	
					~	
					>	
					<	

5. Notes on Special Character Processing

1) Quotes:

Start of Quotes: `"\""`

End of Quotes: `"\""`

Escape Front Quotes: `\"`

2) Line Continue: `"\""`

3) Two types of file extensions are recognized for Bash: `“.sh”` and `“.ksh”`
